

# Webinar Addressing gender imbalance in science

There are many benefits of gender diversity in the workplace. Mixed groups are often more productive, creative, and innovative because they can look at the same problem from different perspectives. Despite we know that diversity is beneficial, there is still a lack of gender balance, in particular in top scientific positions.

Why are we still so far from this goal and what can we do to improve the gender balance?

We would like to discuss this topic during a lunch seminar with Audine Laurian and Erica Madonna. The seminar is for both woman and male colleagues - both perspectives are needed to improve the gender balance!

**Join the webinar on Zoom Friday April 16, 10:00-11:00.  
Meeting ID 659 7820 3586**

**Audine Laurian** is the scientific manager at the German Collaborative Research Center Waves to Weather. Together with colleagues, she started a project to promote gender balance providing role models, women and men, to the students and scientific community.

**Erica Madonna** recently started a new position outside academia. Before that, she worked at the University of Bergen, and was co-leading the Nansen Legacy's research focus 1 on 'physical drivers'.
